

Centralized control for your productive wire processing

Manage your wire processing centrally from one location. WIRE Flow helps you get the most out of your Schleuniger machines.

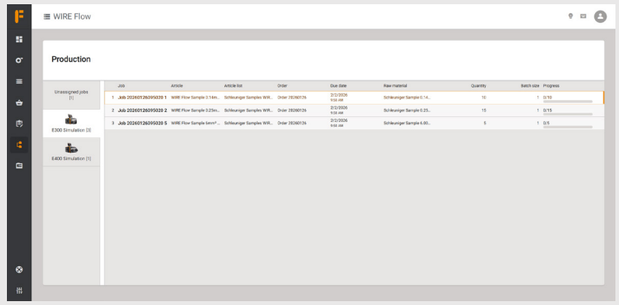

WIRE Flow helps you prevent errors when production orders are executed on the machines. Your cutting area personnel can execute orders sent to the machines without the need for interpretation.

Cover the entire process from material management to the finished production order:
– Import or create your raw material list as the starting point for production (CSV and CAYMAN formats)
– Define your articles: Configure processing steps according to your wire specifications in just a few clicks.
– Prepare production for the planned quantities and due dates
– Reduce the communication effort required with production: Send production orders directly to your Schleuniger machines
– Manage your machine fleet centrally and optimize capacity utilization.

The centralized database stores your raw material and article definitions. Plan additional orders quickly and conveniently from the office.

Features

– Machine administration
– Raw materials management
– Article management and marking functions
– Production orders and job lists
– Dashboard

WIRE Flow
Frontline Operations System

Concept

WIRE Flow is a Frontline Operations System for production planners and other production preparation personnel at wire processing companies. It maps cutting area workflows from raw material all the way to the processed wire product.

The software consists of a centralized database for raw materials, article lists, and production orders. It presents this content in a user-friendly interface, making it easier for users to centrally assign orders to their Schleuniger machines. The active machine fleet is digitally represented in WIRE Flow.

– Centralized production planning from one location
– No more errors when production orders are handed over
– Reduced machine setup times
– Centralized database for raw materials and articles
– Intuitive operation based on the machine user interface you know

Distribute production orders centrally across all machines, conveniently from the office.
